

SOHEE PARK

Senior AI/ML Engineer | Agentic AI Systems | LLM Applications | Data Science

+1 (782) 234-8852 • sohee.sophie.p@gmail.com • github.com/Sohee-sophiePark • linkedin.com/in/sohee-sophie-park • Toronto, ON, Canada

PROFESSIONAL SUMMARY

Senior AI/ML Practitioner with 5+ years building ML and Generative AI solutions for real business problems, mostly in banking. I care about the full journey: from a rough idea to a validated model to something a business can actually use. Certified in AWS ML and Azure, and always pushing into what's next.

TECHNICAL SKILLS

ML & AI: XGBoost, LangChain, LangGraph, GCP ADK, Vertex AI, RAG, LLMs, Agentic AI, Multi-Agent Systems, Bayesian Optimization, NLP

Languages: Python, SQL, PySpark, Spark, JavaScript (React Native)

Cloud & Platforms: GCP (Vertex AI, BigQuery, GCS, ADK), Azure, Databricks, IBM Cloud, Railway, AWS

Data & Pipelines: Airflow, MinIO, Parquet, MS SQL Server, FastAPI, JupyterHub

Tools: Git, Salesforce, SAP, Anthropic SDK, Google Gemini API

PROFESSIONAL EXPERIENCE

Senior Manager, AI Practitioner — Data Science · SCOTIABANK · Toronto, ON Dec 2025 – Present

- **Wealth Advice+ AI Insight:** Contributing to LLM-native AI integration into the Wealth advisor platform, engineering client-level features from both on-prem PySpark clusters and BigQuery on GCP, with prompt and context engineering pipelines for full batch prediction using Gemini on Vertex AI. Inference results integrated into Salesforce for advisor-facing insights. Part of an AI-driven platform recognized by Finance for \$5B+ in referral pipeline (FY2023–FY2025), \$90M+ ongoing in FY2026, and \$7.6M direct revenue attribution.
- **Retail Branch Advisor:** Building a client-level analytics solution for Retail Branch Advisor teams, engineering business-required data pillars and feeding structured client data into BigQuery. Designing prompt and context engineering pipelines for full batch prediction using Gemini on Vertex AI, with daily inference updates and future Salesforce integration.
- **Retail Marketing Agent PoC:** Designed and built a multi-agent agentic AI solution for retail marketing using GCP Agent Development Kit (ADK), orchestrating BigQuery, GCS, Code Interpreter, and Web Search tools to generate customer-segmented marketing strategies targeting 3–5% upsell revenue uplift. Awarded 2nd place at an internal Scotiabank hackathon.

Manager, Data Science & Analytics Engineering · SCOTIABANK · Toronto, ON Jul 2022 – Nov 2025

- **WealthNet Hub:** Built a RAG-based knowledge retrieval solution for Wealth Management internal documents including structured and unstructured data, job aids, annual reports, and product information, using LangChain, Gemini, Chroma vector store, PDF processing, and OCR-based document ingestion. Achieved 89% retrieval accuracy evaluated against a curated SME-defined question set. Experimented with local LLM inference via Ollama across multiple model configurations.
- **AML/TM & EDD:** Built an LLM integration solution for AML Transaction Monitoring and Enhanced Due Diligence using Vertex AI, GCS, and BigQuery on GCP, streamlining compliance workflows and achieving 50%+ efficiency improvement measured and agreed with business.
- **GRM Summarizer:** Built an LLM-powered summarization solution for Global Risk Management using Vertex AI, GCS, and BigQuery on GCP, with a Streamlit UI running on a VM and scheduled shell jobs for automated processing. PoC progressing to production, achieving 20–30% efficiency improvement measured and agreed with business stakeholders.
- **Mutual Fund Attrition Model:** Built an XGBoost churn prediction model for Wealth clients using Bayesian optimization on imbalanced data. Calibrated the decision threshold to retention team operational capacity rather than default 0.5, with top 2 deciles capturing 80% of actual churners at 4× lift over random outreach, directly enabling targeted retention campaigns. Built and configured automated pipelines on the shared platform using PySpark on Spark clusters with parallel Airflow jobs, loading features and model results into

MinIO/Parquet layers, later set up equivalent pipelines on GCP using dbt, Cloud Composer, and Spark jobs loading into BigQuery.

Big Data Developer · SDK TEK · Calgary, AB

Dec 2021 – Jul 2022

- Developed scalable ELT pipelines in Azure Databricks processing enterprise data at scale, achieving 85% reduction in processing time. Implemented SCD Type 1 & 2 logic with automated workflows for accurate data versioning across reporting systems.

SAP Application Developer · IBM · Halifax, NS

Jul 2020 – Dec 2021

- Designed SAP applications and Open SQL scripts for Public Sector cloud projects with Azure-based service portal integration. Built sentiment analysis and clustering models using IBM Watson APIs and Python NLP to extract actionable insights from customer feedback.

CERTIFICATIONS

- AWS Certified Machine Learning – Specialty
- Microsoft Certified: Azure Data Engineer Associate
- AWS Certified Developer – Associate
